You are about to purchase a product considered to be very complex and may be difficult to understand.

What is this product?

Type

A CFD is a leveraged contract entered into with **Squared Financial (CY) Limited (ex. Aspide Financial Ltd)** (the “Company”) on a bilateral basis, settled in cash. It allows an investor to speculate on rising or falling prices on an underlying Energy pair. Energies are traded in pairs (e.g. XTI/USD) and involves the simultaneous buying and selling of two different values. The first listed value of a pair is called the “Base” and the second the “Quote” currency. The profit and loss will accrue in the “quote currency”. This document provides key information on CFDs where the underlying investment option that you choose is an Energy such as Crude Oil. Energies are rare, highly tradable commodities, with a high economic value.

CFDs are leveraged products and leverage is customized and set by the client. At the end of the day any open positions are rolled over and changed a daily swap fee. Please note that margin trading requires extra caution because whilst you can realize large profits if the price moves in your favor, you risk extensive losses if the price moves against you. Failure to deposit additional funds in order to meet the maintenance margin requirement as a result of a negative price movement may result in the CFD being auto-closed. This will occur when your remaining account equity falls below the maintenance margin requirement.

Objectives

The objective of the CFD is to allow an investor to gain leveraged exposure to the price movement of an energy future and your return depends on the movement in the price of the Energy future and the size of your position, without owning the physical Energy future. For example, if you believe the Crude Oil will increase in value in relation to the USD, you will buy a CFD on XTI/USD (also known as “going long”) with the intention of selling it later at a higher price. The difference between the price at which you buy and sell equates your profit minus any other costs (see details below). On the other hand if you believe that the Crude Oil will decrease in value in relation to the USD, then you will sell a CFD on XTI/USD (also known as “going short”) with the intention of buying it later at lower price. The difference between the price at which you sell and buy equates your profit minus any other costs (see details below). However, in both circumstances, if the market moves in the opposite direction to the one you have predicted, you will suffer losses. Trading with leverage can magnify both the profits and losses you make in relation to the investment.

Intended Retail Investor

CFDs are intended for investor who have knowledge of, or are experience with, leveraged products and that understand how the prices of CFDs are derived, the key concepts of margin and leverage, the fact that losses may be of total invested amount and have the appropriate financial means to bear losses of the entire amount invested. CFDs are also intended for investors who can allow themselves to take a high risk and intend to use the product for short-term investment and/or speculative trading.

What are the risks and what could I get in return?

Risk Indicator

1

2

3

4

5

6

7

← Lower Risk Higher Risk →

The risk indicator assumes that you may be able to buy or sell your CFD at the price you wanted to due to volatility of the market or you may have to buy or sell your CFD at a price that significantly impacts how much you get back.

The Summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of the market movements.

We have classified this product as **7 out of 7**, which is the highest risk class. This rates the potential losses from future performance of the product at a very high level.

The investor can lose the entire investment capital taken as the security deposits for opening a trade on the product item. There is no capital protection against market, credit or liquidity risk.

- **Be aware of Currency Risk:** It is possible to buy or sell CFDs on a commodity in a currency which is different to the base currency of your account. The final return you may get depends on the exchange rate between the two currencies. This risk is not considered in the indicator shown above.
- **Leverage Trading:** It magnifies the losses of price movements and failure to deposit additional funds may result in the CFD being auto-closed.
- **Force Closure Risk:** Investing in CFDs runs the risk of positions being force closed by the Company without the investor's consent, due to abrupt movements in the underlying financial instrument alongside the use of leverage (margin trading), in the event an investor's margin level reaches a pre-determined rate (for more information see 'Costs & Charges' section below).
- You are also subject to risks related to internet failures, communication failures and delays or account password theft.

This product does not include any protection from future market performance, so you could lose some or all of your investment. If we are not able to pay you what is owed, you could lose your entire investment. However, you may benefit from a consumer protection scheme (see the section '[What happens if the Company is unable to pay you](#)'). The indicator shown above does not consider this protection.

There may be other risk factors with significant direct impact on the capital and return of investing in CFDs.

Performance Scenarios

The scenarios shown below illustrate how your investment could perform. You can compare them with the scenarios of other products. The scenarios presented are an estimate of future performance based on evidence from the past on how the market performs and how long you hold the CFD. The stress scenario shows what you might get back in extreme market circumstances, and it does not take into account the situation where we are not able to pay you.

The following assumptions have been used to create the scenarios in **Table 1**:

Energies CFD (held intraday)		
Energy Pair opening price:	P	\$50
Trade size (per CFD):	TS	1,000
Margin %:	M	1%
Margin Requirements (EUR):	MR = P x TS x M	\$500
Notional value of the trade (EUR)	TN = MR/M	\$50,000

Table 1:

LONG Performance Scenario	Closing Price	Price Change	Profit/Loss	SHORT Performance Scenario	Closing Price	Price Change	Profit/Loss
Favourable	50.75	1.50%	750	Favourable	49.25	-1.50%	750
Moderate	50.25	0.50%	250	Moderate	49.75	-0.50%	250
Unfavourable	49.25	-1.50%	-750*	Unfavourable	50.75	1.50%	-750*
Stress	47.5	-5%	-2,500*	Stress	52.50	5%	-2,500*

***The loss is restricted to your account balance as we offer Negative Balance Protection.**

The scenarios presented are not an exact indicator of future performance, but an estimation to that effect. What You will get will vary depending on how the market performs and how long You keep the investment/product. The figures do not take into account your personal tax situation, which may also affect how much you get back.

What happens if the Company is unable to pay out?

The Company is a member of the Investor Compensation Fund ("ICF" - private legal entity) which if the Company categorized You as a Retail Client and fails to return to Your funds owed in case of insolvency of the Company, you may direct to the ICF. ICF may compensate You for claims up to €20,000. If Your claim exceeds the €20,000 then You will be only entitled to receive a maximum of the equivalent of €20,000. Further information on ICF can be found [here](#).

What are the Costs & Charges?

Pricing and other Related Information

Before you begin to trade CFDs on Indices, you should familiarise yourself with all one-off and recurring costs for which you will be liable. These charges will reduce any net profit or increase your losses. More information on these can be found on our website.

One Off Costs		LINK
Spread	<p>The difference between the bid and the ask price at the time of the conclusion of the transaction. The cost can be different depending on market conditions.</p> <p><i>*Example 1:</i> The spread on the UK 100 is 1.0, calculated by subtracting 6446.7 (sell price) from 6447.7 (buy price).</p> <p><i>*Example 2:</i> The spread on the GBP/USD is 0.9. If you subtract 1.65364 from 1.65373, that equals 0.00009, but as the spread is based on the last large number in the price quote, it equates to a spread of 0.9.</p>	
Commission	The fee to be charged at the opening and closing of the transaction. The fee applies only to Standard and Premium Accounts	
Exchange Fees	The fee to be charged at the opening and closing of the transaction	
Recurring Costs		
Swap Rates	<p>Holding positions for another day results in the charge of fee</p> <p><i>The calculation for swaps is as follows: Swap = (one pip / exchange rate) * (trade size) * (swap value in points).</i></p>	

How long should I hold it and can I take money out early?

CFDs are intended for short term trading, in some cases intraday and are generally not suitable for long-term investment. There is no recommended holding period and no cancellation period. You can open and close a CFD on Energies at any time during the market trading hours of each CFD.

How can I complain?

An [Online Complaint Form](#) is available at the Company's website, which shall be filled and submitted by You to the Company's Compliance department directly from the website. For more information please see our [Complaints Procedure](#).
